

Crop Recommendation: Rice

Description:

Rice is a staple food crop for more than half of the world's population. It's grown in flooded fields known as rice paddies.

Growing Conditions:

- Growing Season: Summer to early autumn
- Water Requirements: High (flooded conditions)
- Optimal Temperature: 20-35°C during growing season
- Soil Preference: Clay soils that hold water well, pH 5.5-6.5

Nutritional Value:

Good source of carbohydrates, contains some protein, vitamins and minerals

Growing Tips:

Planting

- Plant during Summer to early autumn
- Ensure soil pH is appropriate for rice
- Space plants properly

Care

- Water according to High (flooded conditions)
- Monitor for pests
- Apply appropriate fertilizers

Harvesting

- Harvest at maturity
- Use proper techniques
- Store properly
